

Daniel Querales

March 18, 2022

Hi, my name is Daniel Querales, and I'm an Electrical Engineer looking to flex my talents to identify new growth strategies for Treinta as a Business Analyst. I've always been fascinated by numbers, and working in data analytics has been a long-term goal of mine. My background in statistics, electronics and control systems has taught me to think strategically about problems and identify solutions. I believe this experience would make me a great addition to the team.

Your job posting mentioned that you're looking for a Data Scientist with experience in SQL and Python, proficiency in a statistical programming language, and knowledge in machine learning algorithms. During the previous year (pandemic), I've been pursuing my passion for data, both at work and in my spare time. So, I've also self taught some data driven applications for common business problems. I've been able to achieve the following:

- Uses of apriori algorithm for product recommendations.
- Logistic regression for fraud detection in finance environments.
- Unsupervised machine learning for clustering customers for a marketing.

Please find my resume attached and feel free to contact me. Thank you for taking the time to consider my application. I hope to hear from you soon.

Sincerely,

Daniel Querales
