

DANIEL QUERALES

· Entry-Level Data Analyst ·

SUMMARY

An Electrical Engineer (mention in electronics and computer science) with a strong background in maths, probability and statistics looking for an entry level data science position to get involve into the world of data. Familiarized with tools like SQL, Tableau and Python for data transformation, cleaning, analysis, prediction and visualization.

RELATED PROJECTS

Data Exploration: Two years of COVID-19

- A data exploration project of the COVID-19 dataset.
- Used SQL to explore the values of total cases, total deaths & people fully vaccinated.
- The data was visualized with Tableau Public tools.

Data Cleaning using SQL: Real Estate Datasets

- A data cleaning and transformation project of a real estate dataset.
- Used MySQL on MySQL Workbench
- Applied date format manipulation, nulls values replacement, reorganization and extraction of zip-code, states and streets, etc.

Machine Learning: Predicting Tesla Stock Prices

- A machine learning project of the Tesla (TSLA) stock historic prices dataset.
- Predicted values using linear regression.
- Data exploration of the prices with Python tools like Pandas, Numpy and Plotly.
- Splited the data into training and test partitions to remodel and score the results.

Sales Analysis: Electronics Store

- A data cleaning and transformation project of the sales from an electronic store using Python.
- Merged multiple files into a single CSV format.
- Transformation of multiples dates formats. Data cleaning operations.
- Extracted insights about the best products sales, the best months for sales, products often sell together and most frequent hour for sales.

EDUCATION

Engineer's Degree in Electrical Engineering · 2008-2019

Universidad Central de Venezuela

Mention in Electronics, Computer Science and Control Systems

WORK EXPERIENCE

Freelancer · 2019-2022

Hardware Description, Numerical Methods and Control Systems
