Dear Ms./Mr. Hiring manager's name,

My name is Daniel Querales, and I'm an Electrical Engineer looking to flex my talents to identify new growth strategies for Company as a Data Analyst. I've always been fascinated by numbers, and working in data analytics has been a long-term goal of mine. My background in statistics, electronics and control systems has taught me to think strategically about problems and identify solutions. I believe this experience would make me a great addition to the team.

Your job posting mentioned that you're looking for an analyst with experience in SQL, proficiency in a statistical programming language, and strong time management skills. During my previous role as a restaurant manager, I had to multitask to balance the needs of the company (revenue) and the customer (service and quality standard). I've also been pursuing my passion for data, both at work and in my spare time. Over the past year, I've been able to achieve the following:

- Automated repetitive restaurant payroll and accounting tasks with Python, freeing up three hours per week
- Completed a case study using point-of-sales data from the restaurant to optimize our menu and pricing, leading to a revenue increase of 10 percent
- Completed the Google Data Analytics Professional Certificate, which included extensive coursework in both SQL and R

Please find my resume attached. Feel free to contact me. Thank you for taking the time to consider my application. I hope to hear from you soon.

Thank you for your consideration,

Daniel Querales
